FULL STACK WEB DEVELOPER

Full stack developer with 3+ years of experience building web applications, focused on the frontend. Currently building the React client for TechBus, a multi-platform B2B & B2C tech marketplace. I love turning real problems into solutions people actually enjoy using.

SKILLS

Frontend: React (React Router, TanStack Query), Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass, CSS Modules, Bootstrap, MUI, Vite

Backend: Node.js, Express, Python, Flask, Django, REST APIs

Databases: PostgreSQL, MySQL, SQLite, MongoDB, SQLAlchemy

Practices & Tools: Git/GitHub, SEO, responsive design, Claude Code

PROFESSIONAL EXPERIENCE

TechBus (B2B, B2C tech marketplace)

Frontend Engineer

Dec 2025 - Present

Tech: React 19, Vite, React Router 7, TanStack Query, Axios, REST

- Built the web client for a 5-platform (IT Vendors, Businesses, IT professionals, Recruiters & Training Centers) marketplace ecosystem in one shared React codebase.
 - Built reusable cross-platform modules (dashboard, job board, notification center, billing...) so one implementation serves several platforms.
 - Shipped subscription billing, promo/QR redeem codes and a freelancer hiring flow end to end against a REST API.
 - Cut the initial JS bundle by about 92% (2.8 MB to 230 KB) with route-level code splitting, self-hosted fonts and image optimization, raising mobile PageSpeed from 59 to 100.
 - Used Claude Code as an AI pair programmer for implementation, and owned the architecture, code review, debugging and manual QA of every feature before release.
-

ImperialJet Europe GMBH

Frontend Engineer

Nov 2023 - Oct 2025

Tech: React 18, Vite, React Router 6, CSS

- Rebuilt the website of a Munich private jet charter operator in React, replacing a slow, dated WordPress front end: three-step quote flow, fleet and aircraft pages, service and safety content, and contact page, in light and dark themes.
 - Developed an accessible airport search (ARIA combobox, full keyboard support) over 9,101 airports, loaded on demand.
 - Reached Lighthouse 90–95 performance (mobile) and 100 accessibility, best practices and SEO; cut the main JavaScript bundle 38% (155 to 96 kB gzipped).
 - Built a token-based design system with system-aware theming and replaced three duplicated pages with one data-driven template.
-

Mövenpick Hotel

IT Support

May 2023 - Nov 2023

Tech: Javascript

- Automated the removal of pool access for weekend-pass holders, replacing a manual process. Wrote a JavaScript script that runs nightly at midnight and filters hundreds of guest records by category, date, time and status, so only expired weekend passes lose access.
- Added logging so the manager could review exactly what the script changed each night.
- Built a web app for the pool and spa manager that turns a slow, hard-to-navigate reporting process into one click. The manager picks a date and gets every guest who entered, how many times each entered and the daily total, filterable by cabana or bracelet guests, ready to print.

PROJECTS EXPERIENCE

Novagram | [Live demo](#) | [Github](#)

Jan 2023 - Mar 2023

Tech: React, Flask, SQLAlchemy

Novagram is a social media web app, a clone of one of the most famous apps INSTAGRAM.

- Built a full social feed with likes, comments, saves, follows, notifications and search.
- Managed server state with React Query: an infinite-scroll Explore feed, mutations for likes and follows, and targeted cache invalidation so only affected data refetches.
- Designed a responsive UI in plain CSS, with a dedicated mobile navigation and a dark theme, and no CSS framework.
- Originally built with a Flask + SQLAlchemy REST backend and cloud image uploads; the live demo runs on a mock API so it works without a server.
- Designed a responsive plain-CSS UI with a reusable UI kit and light and dark design tokens; cut the initial JavaScript by 43% (149 to 85 kB gzipped) with route-level code splitting and idle prefetching

EDUCATION

Haret Hreik Public School 2019

Diploma in General Sciences

CS50x: CS50's Introduction to Computer Science
